EDUCATION

B.Tech in Computer Science

Institute of Engineering and Technology, Lucknow

Expected Jul 2026

CGPA: 8.25/10

- Relevant Coursework: Data Structures and Algorithms, Object-Oriented Programming, Computer Architecture, Operating System, Computer Networks, Database Management Systems.

Projects

MoodLens-AI — [GitHub Repository](#) — Dec 2025

- Developed an end-to-end deep learning application for facial emotion classification (Happy vs Sad) using TensorFlow and Keras, achieving consistent prediction accuracy.
- Implemented a robust preprocessing and inference pipeline (resize, normalization, batching) and evaluated the model using accuracy, precision, and recall to ensure reliable predictions on unseen images.
- Built a custom Convolutional Neural Network (CNN) architecture with optimized data pipelines (caching, prefetching) and deployed the model via a FastAPI backend for real-time inference.
- Tech Stack: Python, TensorFlow (Keras), FastAPI, Uvicorn, Jinja2, HTML/CSS.

Resume Screening App — [GitHub Repository](#) — Dec 2025

- Developed an end-to-end Natural Language Processing (NLP) application to automate resume categorization into targeted job profiles (e.g., Data Science, Java Dev) using supervised machine learning.
- Built a robust text preprocessing pipeline using Regex and NLTK to clean unstructured data, and optimized the TF-IDF vectorizer by reducing dimensionality to 1,500 features for low-latency inference.
- Deployed the solution as a live, interactive web application on Streamlit Cloud, enabling real-time file parsing and instant classification results for users.
- Tech Stack: Python, Scikit-Learn, NLTK, Numpy, Pandas, Matplotlib, Streamlit.

Generative Pretrained Transformer (GPT) — [GitHub Repository](#) — Jan 2026

- Engineered a 124M-parameter Causal LLM from scratch, strictly adhering to the GPT-2 architecture with 12 decoder-only layers and 12 attention heads to capture long-range dependencies.
- Implemented a custom Pre-Layer Normalization architecture with GELU activations and residual connections, resolving vanishing gradient issues and ensuring stable signal propagation during deep network training.
- Optimized the training loop using the AdamW optimizer and Cross-Entropy Loss, successfully reducing training loss from 9.81 to 0.62 and achieving coherent text generation via Nucleus sampling strategies.
- Tech Stack: PyTorch, Python, VS Code, Colab

Achievements

CODEFORCES:

SPECIALIST — Highest Rating - 1536

- Achieved Global Rank 314 in Codeforces Round 928 (Div. 4) out of 30,000+ participants.

CODECHEF:

3 STARS — Highest Rating - 1605

- Ranked 667 globally in CodeChef Starters 124 (Division 3).

LEETCODE:

Highest Rating - 1811

- Placed Global Rank 1554 in LeetCode BiWeekly Contest 156.

Skills Summary

- **Languages**: C, C++, Python, Java, JavaScript, HTML, CSS
- **Tools**: Numpy, Pandas, PyTorch, TensorFlow(Keras), NLTK, Deep Learning, Natural Language Processing, Matplotlib, Scikit-learn, Uvicorn, VS Code, Sublime, Colab, Streamlit, GitHub, LATEX
- **Technical Skills**: Data Structures and Algorithms, Problem Solving, Competitive Programming
- **Soft Skills**: Leadership, Teamwork, Time Management, Adaptability, Critical Thinking
